IMPORTANT !**SOFTWARE MAINTENANCE REPORT****PLEASE FILE IMMEDIATELY**

PROBLEM: The new scheduler of ETOS V5B included a decision that overloads the queuing operation. The following one line patch improves the performance.

SOLUTION: This patch should be installed under stand-alone OS/8.

PROBLEM: The ETOS V5B queuing scheduler does not remove a job properly from the table of tasks. This may result in a job being unable to get on the queue again.

SOLUTION: This patch should be installed under stand-alone OS/8.

IMPORTANT !

SOFTWARE MAINTENANCE REPORT

PLEASE FILE IMMEDIATELY

PROBLEM: Some ETOS sites with large numbers of accounts, whose OS8DISK.DSKs exists on a drive other than the system one, will have a corrupt record appear in the Master File Directory (MFD) as shown in Figure F-45.

Figure F-47
Evidence For a Corrupt Map Block

02,17 AJG	<0077>	0001	1	12 FEB. '81
02,20 ENT	<0077>	0001	1	12 FEB. '81
02,21 ABC	<0077>	25744561	5753201	25 FEB. '81
02,22 SHACK	<0077>	0001	1	12 FEB. '81
02,23 BOSTON	<0077>	0001	1	12 FEB. '81
02,24 JGR	<0077>	0001	1	12 FEB. ' 81

The Account Program crashes the ETOS operation if the corrupt account's User File Directory is accessed or even printed.

The user whose account is corrupt cannot LOGIN to ETOS without crashing the system.

SOLUTION: The corrupt map block must be replaced with valid data. This requires two steps:

1. To determine the location of the corrupt map block.
2. Change the block to valid data.

To determine the location of the bad map block type the following instructions while LOGged INTO a PRIVileged account under ETOS.

software product	version	patch?	yes	no
ETOS V5B	V5B			X
component	sequence	required?		
ETOS (RMON)	0005		NO
