NOTES:
1) FOR CIRCUIT SCHEMATIC REFER TO DRAWING NUMBER D-CS-5410094-0-1
2. WIRE WRAP ONE END OF 24 GAUGE BLK WIRE TO PIN F02T1 AND SOLDER THE OTHER END TO THE LOCKING TERMINAL WHICH IS MOUNTED UNDER THE SYSTEM UNIT MOUNTING SCREW.
3. INSURE THAT WIRE SHIELDS ARE IN PLACE PRIOR TO LOGIC BEING WIREWRAPPED.

ENGINEERING SPECIFICATION digital CONTINUATION SHEET

TITLE DF11 Serial Line Signal Conditioning Options

I. General

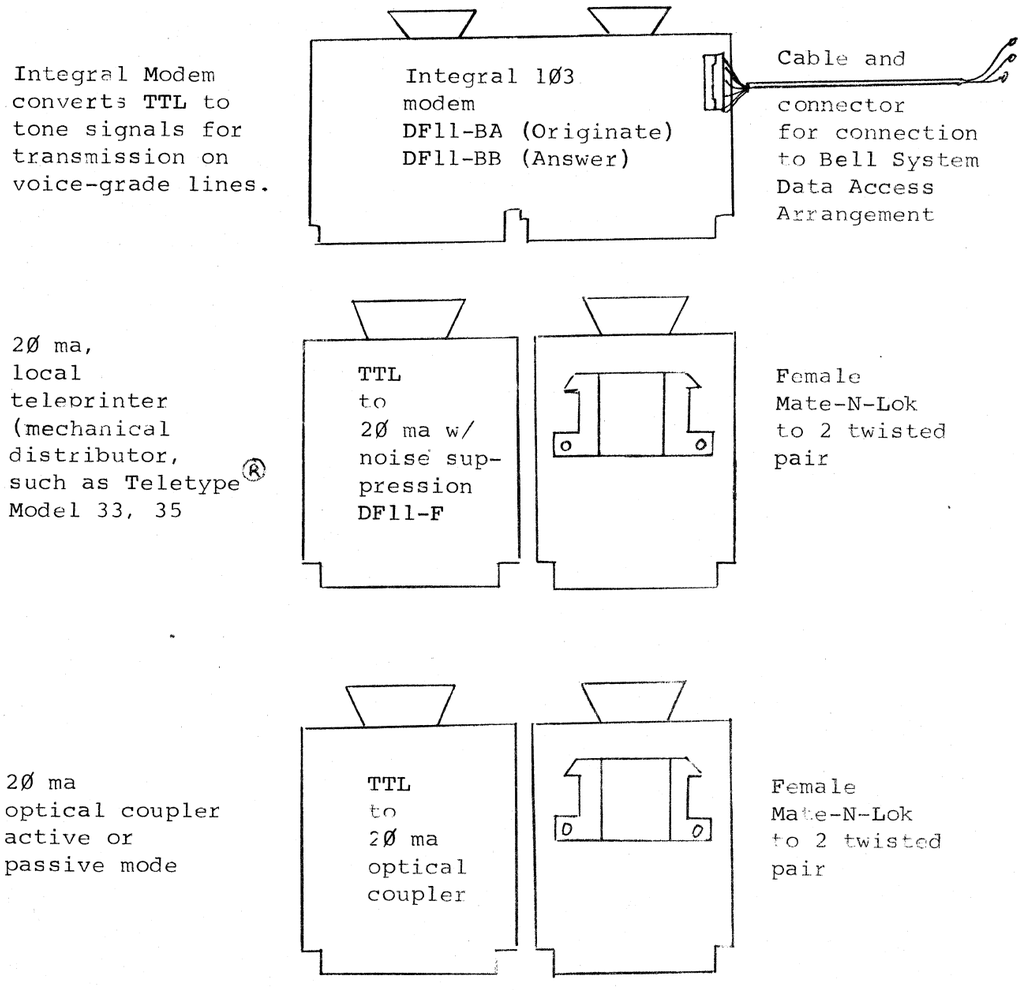

Modern digital computers handle almost all data signals as Transistor-Transistor Logic (TTL) levels. These levels must then be converted to other voltage levels or current values to prepare them for application to communications media so that they can be transmitted to a distant processor or terminal. In addition to the need for level conversion, there is a requirement to have cables of various lengths equipped with a variety of specialized fittings for each communications medium serviced.

A DF11 unit will normally consist of two single height (8-1/2" by 3") modules. One module performs the electrical signal conditioning function of converting from TTL signal levels to the external signal levels required (e.g. EIA RS-232-C, 20 milliampere current loop, Bell System CBS or CDT Data Access Arrangements, etc.). The second module performs the physical interface function; i.e. furnishes a cable to connect the level-converted signals produced by the first module to the desired device or channel. In the case of the DF11-A RS-232-C/CCITT Recommendation V24 Interface, the second module provides a 25-conductor cable and plug to connect the level-converted signals on the back panel wires to the dataset.

DEC FORM NO DEC 16-(381)-1022-N370 DRA 108

® "Teletype" is a registered trademark of Teletype Corporation, Skokie, Illinois

II. Variations

DF11-A TTL to EIA RS-232-C/CCITT V24

This option consists of an M594 module and a BC01R cable assembly. (A BC05C cable and M971 module may be supplied as equivalent to a BC01R).

DF11-BA TTL to audio frequency shift keyed tone signals.

This option consists of an M586 module (integral 103-type modem in the Originate-Only mode). Twenty-five foot cable and connector provided for connection with Bell System Data Access arrangement CDT or private wireline channels.

DF11-BB TTL to audio frequency shift keyed tone signals.

This option consists of an M587 module (integral 103-type modem in the Answer-Only mode). Twenty-five foot cable and connector provided for connection with Bell System Data Access arrangements CBS or CDT.

DF11-F TTL to 20 milliampere active local Teletype® loop.

This option consists of an M596 module and an M973. The M973 has an Amp Mate-N-Lok connector mounted on it for connection with customer supplied 22 AWG, 2 twisted pair cable to a local or remote Model 33 or 35 Teletype®. Reader Run control leads are not provided.

DF11-G TTL to Bell System 301/303 Dataset Interface. Signal levels, cable connector, and signal pinning compatible with the Bell 301/303 Datasets.

This option consists of an M595 module and a twenty-five foot coaxial cable.

DF11-K TTL to active or passive 4-wire current mode (20 ma) loop.

This option consists of an M598 optical coupler module and an M973 Mate-N-Lok module.

III. Specifications

Temperature: All DF11 modules will operate from 10°C to 50°C with relative humidity from 20% to 95% (without condensation).

Speed & Distance:

DF11-A 9600 baud at 50 feet with DEC supplied cable.

DF11-BA 300 baud with 0 dbm to -50 dbm received signal level when used with CDT data access arrangement, 300 baud with 0 dbm to -50 dbm received signal level when used on private wires. Transmit level is 0 to -12 dbm pot adjustable.

DF11-BB 300 baud with 0 dbm to -50 dbm received signal level when used either with CBS, CDT,

or private wires. Transmit level is 0 to -12 dbm pot adjustable.

DF11-F 110 baud at 5000 feet 22 AWG twisted pair telephone cable when inserted jumpers are in place (TTY noise filter). 2400 baud at 3000 feet with 22 AWG "QUAD" wire (DEC PN 9105856-4) and using the DF11-K (Passive transmit and receive) at the other end.

DF11-G 250K baud with DEC-supplied 25 foot cable.

DF11-K 2400 baud at 1500 feet of 22 AWG twisted pair telephone cable.

NOTE: The data rates and distances cited above are those warranteed by Digital. They are applicable in electrically quiet environments and do not necessarily represent limiting values. Jumpers on M5960 (DF11-F) must be cut for speeds above 110 baud.

IV. Applications:

	DC11	DL11*	DM11	DP11	LA30S
DF11-A	YES	2	YES	YES	YES
DF11-BA	1	1	3	NO	YES
DF11-BB	1	1	YES	NO	3
DF11-F	YES	2	YES	4	5
DF11-G	NO	NO	NO	YES	NO
DF11-K	YES	YES	YES	4	YES

* DL11 refers to DL11 in DD11B system unit or 11/05.

NOTES: 1. The DF11-BA and DF11-BB require +15 volts and -15 volts. They may be used with the DC11 and DL11 only if these voltages are available.

2. The DL11 contains its own active 20 ma and EIA interface circuits. While the DF11-A or DF11-F could be used, it would be a duplication of equipment.

3. It is anticipated that the DF11-BA will be used in terminals such as the LA30S and the DF11-BB will be used in processor options such as the DM11. Technically, they could be used in the reverse order, but this would not be recommended, since the DF11-BA does not have auto-answer capability.

4. No applications have been found for the DF11-F and DF11-K with synchronous controls due to clocking problems.

5. The DF11-F is "active" only and hence would not typically be used in a terminal.

V. Connectivity:

	DF11-A	DF11-BA	DF11-BB	DF11-F	DF11-G	DF11-K
DF11-A	1	NO	NO	NO	NO	NO
DF11-BA	NO	NO	YES	NO	NO	NO
DF11-BB	NO	YES	NO	NO	NO	NO
DF11-F	NO	NO	NO	NO	NO	YES
DF11-G	NO	NO	NO	NO	NO	NO
DF11-K	NO	NO	NO	2	NO	2

NOTES: 1. Null modem required (H312A)
2. See "Active" vs. "Passive"

VI. "Active" vs. "Passive"

In 20 ma transmission, information is transmitted by means of switching on and off a current flow. To do this, a current source is used; a switch is used; and a current flow detector is required.

In the classical 20 ma device, the Model 33 or 35 Teletype®, the keyboard encoding mechanism contains the "switch" and the printer driver mechanism includes a "current detector". The typical computer console Teletype® control contains a source plus current detector in its receiver circuitry and a source plus switch in its transmitter circuitry. Since the receiver

contains the source, it is referred to as an "active" receiver. Since the transmitter contains a source, it too is referred to as "active". All DEC console teletype controls, and the DF11-F are "active" 20 ma interfaces.

The DF11-K, however, has its greatest volume of use in the LA30S, where it is necessary to simulate a Teletype® interface; i.e., a switch on the transmit leg and a detector on the receive leg. Since there are no sources, the DF11-K is referred to as a "passive" 20 ma interface. Jumpers are provided to connect sources into the receiver circuitry, the transmit circuitry, or both.

When used with a console teletype control or a DF11-F, the DF11-K should be left in passive transmit/passive receive mode. When two DF11-K's talk to each other, the active transmit/passive receive mode is recommended. Be sure to arrange the leads so that the receiver of one is connected to the transmitter of the other, etc.

VII. Pinning Assignments

The following pinning assignments apply to the DF11 series, although individual DF11 options may not use them all:

Cable Slot ("A" slot in DC11, 11/05)("B" slot in(LA30,DH11,DM11)

A1	Do Not Use
B1	Do Not Use
C1	Transmitted Data +
D1	Transmitted Data -

R2	Data Terminal Ready EIA
S2	Request To Send TTL
T2	Request To Send EIA
U2	Secondary Transmitted Data TTL
V2	Transmitted Data TTL

VIII. Notes:

1. Caution should be exercised in ordering DF11 options as add-on's to systems using the DM11 distribution panel. In systems where the customer uses 20 ma or EIA without modem control, a single level conversion module serves four lines. If the customer desires some other type of level conversion, and orders a DF11 series device to do it, that DF11 device must be added in a four-line group for which level conversion is presently not implemented, or the four-line group into which it is introduced must be converted to per-line level conversion. This is necessary to prevent the new level converter and the old "one-per-four-lines"converter from trying to level convert the same line.

2. The DF11 modules are located in the following locations in the following options:

Option	Converter Slot	Cable Slot
DC11 Line Unit 1	DØ1	CØ1
Line Unit 2	DØ4	CØ4
DP11	DØ4	CØ4
DM11 Distribution		
Line ØØ - 15	AØ6 - A21	BØ6 - B21
LA30	A18	B18
11/05	BØ1	AØ1
DD11B	BØ2	AØ2
	BØ3	AØ3
